

11-1 Angle and Line Relationships

Line and Angle Relationships					
Parallel Lines 	Perpendicular Lines 	Vertical Angles  <p>$\angle 1 \cong \angle 3$ $\angle 2 \cong \angle 4$</p>	Adjacent Angles  <p>$m\angle ABC = m\angle 1 + m\angle 2$</p>	Complementary Angles  <p>$m\angle 1 + m\angle 2 = 90^\circ$</p>	Supplementary Angles  <p>$m\angle 1 + m\angle 2 = 180^\circ$</p>

A line that intersects two or more other lines is called a transversal.

Example: In the figure at the right, classify the relationship between the pairs of angles shown. Then find the value of x .

The angles are complementary. The sum of their measures is 90° .

So, $m\angle x$ is 56°

Try these: Classify the pairs of angles shown. Then find the value of x in each figure.

Names of Special Angles

Alternate interior angles are on opposite sides of the transversal and inside the parallel lines.

$\angle 3$ and $\angle 5$, $\angle 4$ and $\angle 6$

Alternate exterior angles are on opposite sides of the transversal and outside the parallel lines.

$\angle 1$ and $\angle 7$, $\angle 2$ and $\angle 8$

Corresponding angles are in the same position on the parallel lines in relation to the transversal.

$\angle 1$ and $\angle 5$, $\angle 2$ and $\angle 6$,
 $\angle 3$ and $\angle 7$, $\angle 4$ and $\angle 8$

When a transversal intersects two parallel lines, pairs of alternate exterior angles, alternate interior angles, and corresponding angles are congruent.

Example In the figure, $f \parallel n$ and v is a transversal. If $m\angle 3 = 100^\circ$, find $m\angle 1$ and $m\angle 6$.

Since $\angle 1$ and $\angle 3$ are corresponding angles, they are congruent. So, $m\angle 1 = 100^\circ$. Since $\angle 3$ and $\angle 6$ are alternate interior angles, they are congruent. So, $m\angle 6 = 100^\circ$.

Try This:

In the figure on the right, $l \parallel m$ and t is a transversal. If $m\angle 1 = 61.2^\circ$ and the $m\angle 6 = 118.8^\circ$, find the measure of each angle.

- 1) $\angle 7$ 2) $\angle 3$ 3) $\angle 4$ 4) $\angle 8$ 5) $\angle 5$ 6) $\angle 2$

In the figure on the right, $g \parallel h$ and f is a transversal. If $m\angle 1 = 125^\circ$ and the $m\angle 6 = 55^\circ$, find the measure of each angle.

- 7) $\angle 2$ 8) $\angle 4$ 9) $\angle 5$ 10) $\angle 3$ 11) $\angle 8$ 12) $\angle 7$
